FW: RUSH sequence search request 09/532,001

Hi, do you submit sequence search requests? Jeff and Jim are out of the office. If not, could you let me know who else does?

thanks. Melissa

RUSH sequence search request 09/532,001

I missed a sequence in the claims and this is a two month amended.

Please search SEQ ID NO:1 in nucleic acid databases. Please search both SEQ ID NO:1 as well as the complement sequence. Please size limit the results to less than 50 bases (so that in the results only hits less than 50 bases will appear).

Thanks,

Melissa Schmidt

proteins, including hormones, by renal cells in a 3-dimensional co-culture process responsive to shear stress using a rotating wall vessel. Natural mixt. of renal cells expresses the enzyme 1.alpha.-hydroxylase, which can be used to generate the active form of vitamin D - 1,25-diOH vitamin D3. The fibroblast cultures and co-culture of renal cortical cells express the gene for erythropoietin and secrete erythropoietin into the culture supernatant. Other shear stress response genes are also modulated by shear stress, such as toxin receptors megalin and cubulin (gp280). Also provided is a method of treating in-need individual with the functional proteins produced in a 3-dimensional co-culture process responsive to shear stress using a rotating wall vessel.
